

Cluster 1

Tripster

System Architecture: Day tour search component

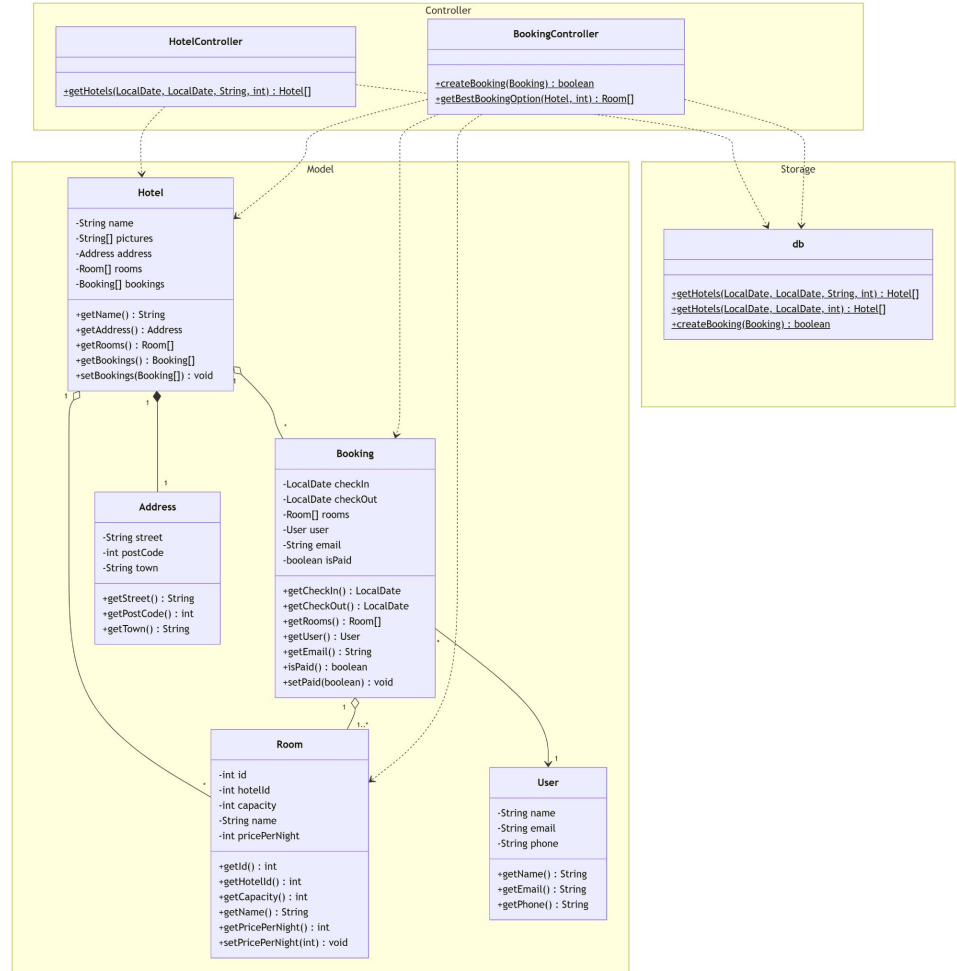

Retrospective

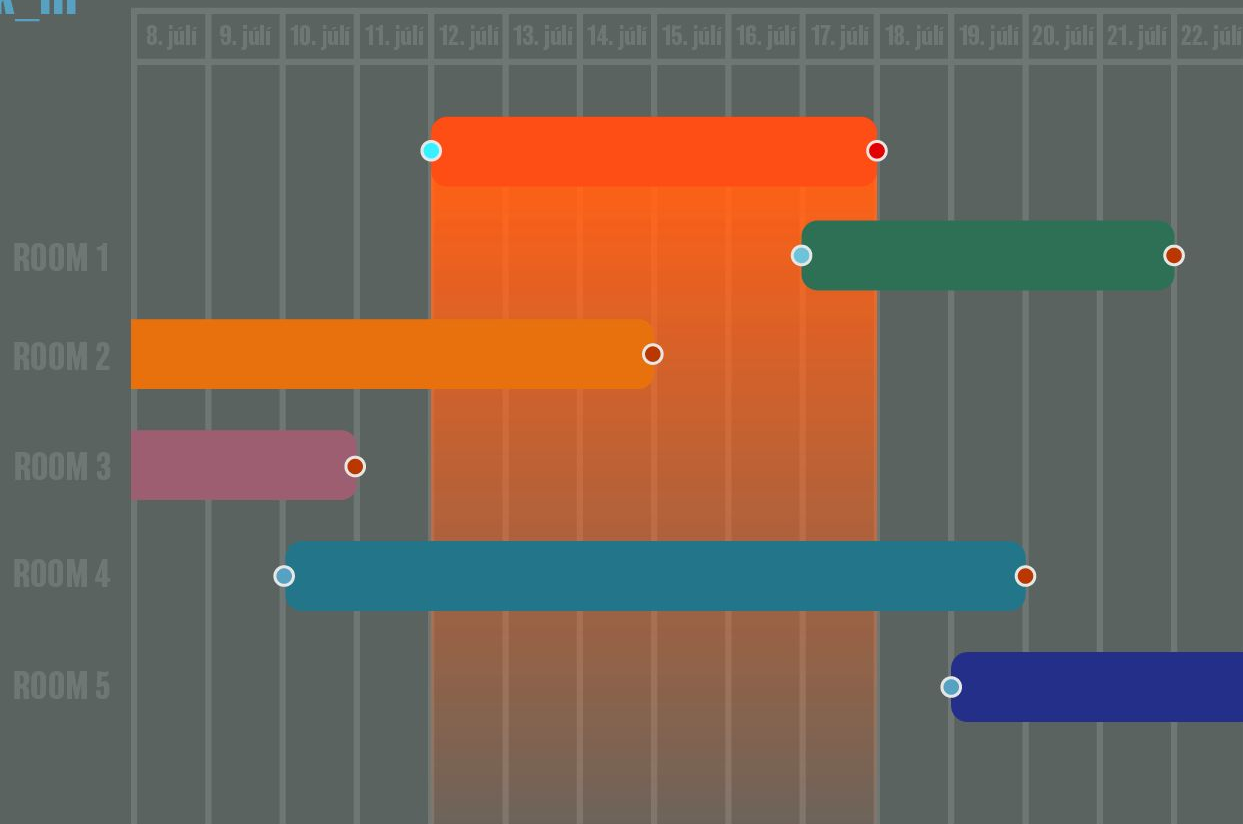

- Prep work pays off
 - System design / architecture
 - Real conversations
 - User stories - planning poker etc.
- Assignments/presentations split between teammates
 - Presenting teammate also presents for teammates
- Github
 - No branches, push to main
- What could have gone better?
 - Communication between teams
 - Planning work - measure twice, cut once

System Architecture: Hotel search component

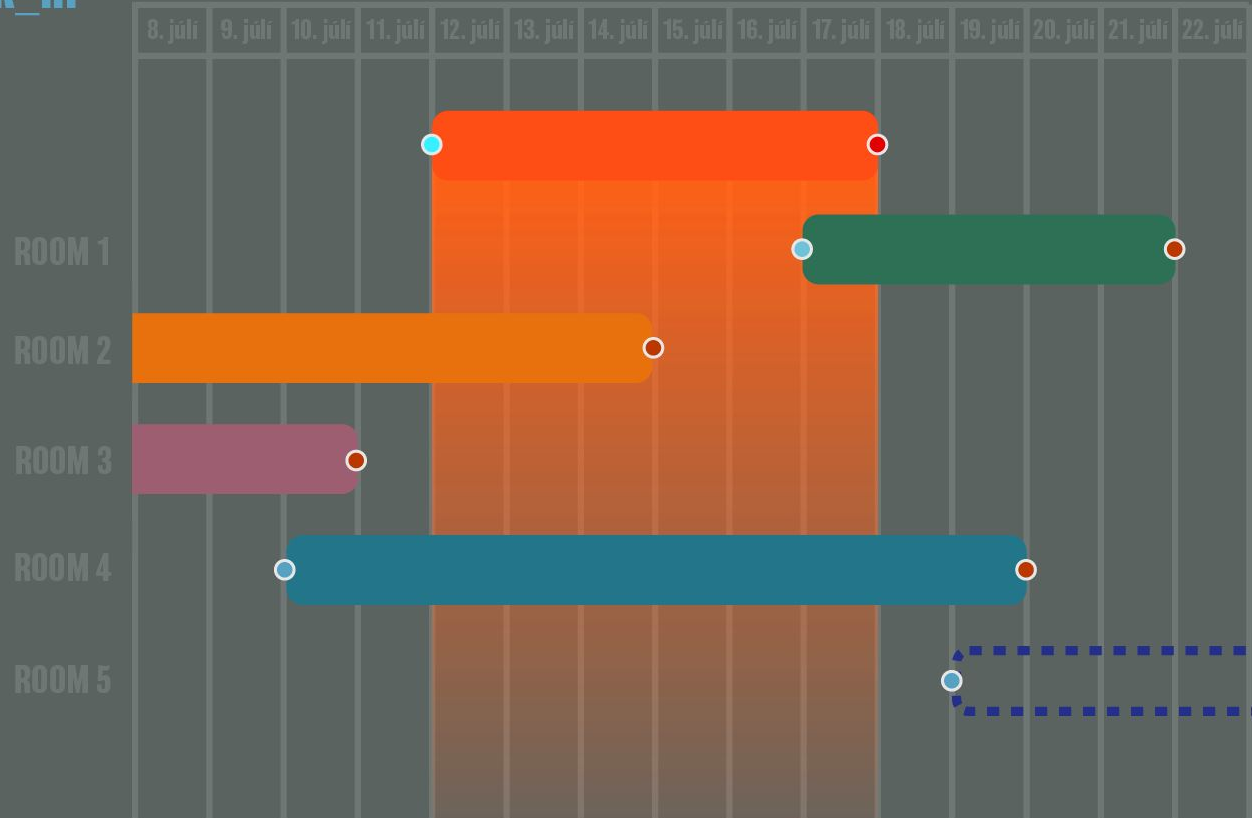

- UserController was implemented by T-team
- User is available but not required
- One db class that both controllers use

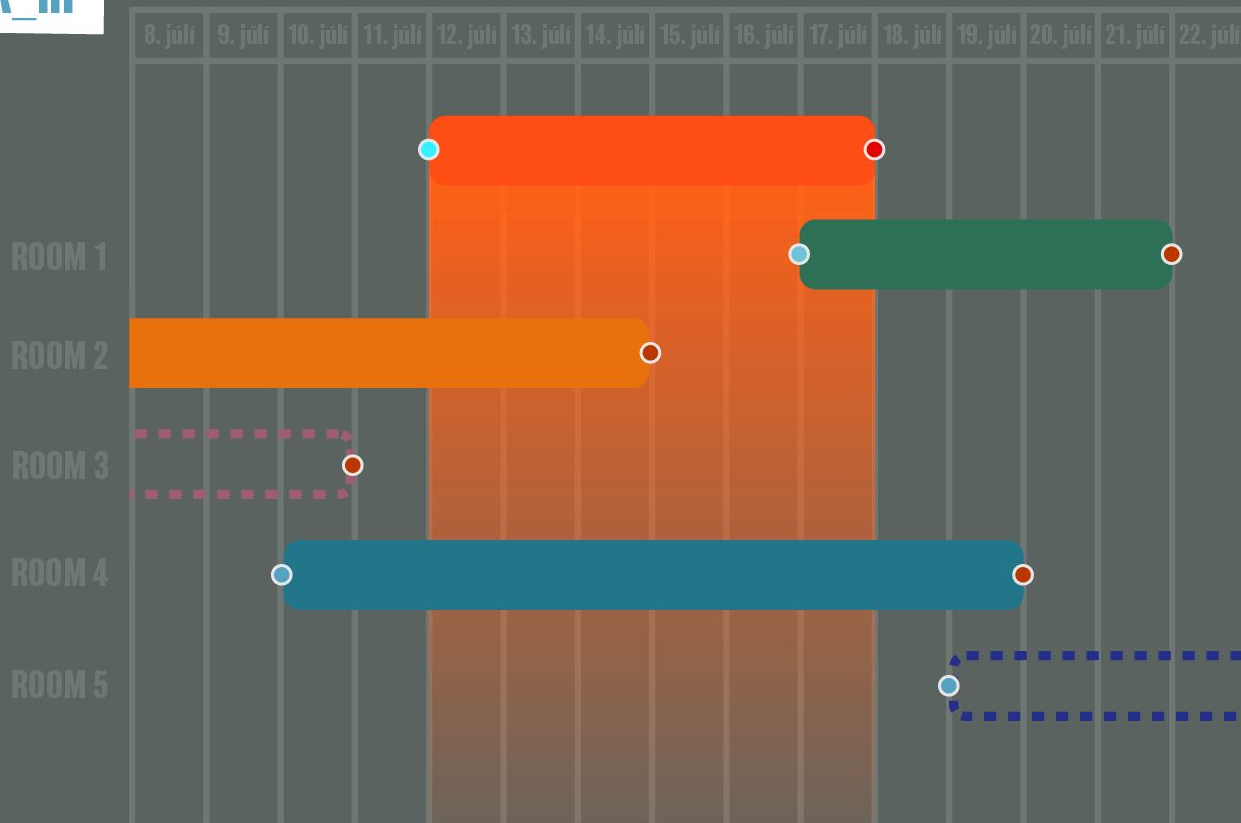

WHERE **search_in** < **check_out**
AND **search_out** > **check_in**

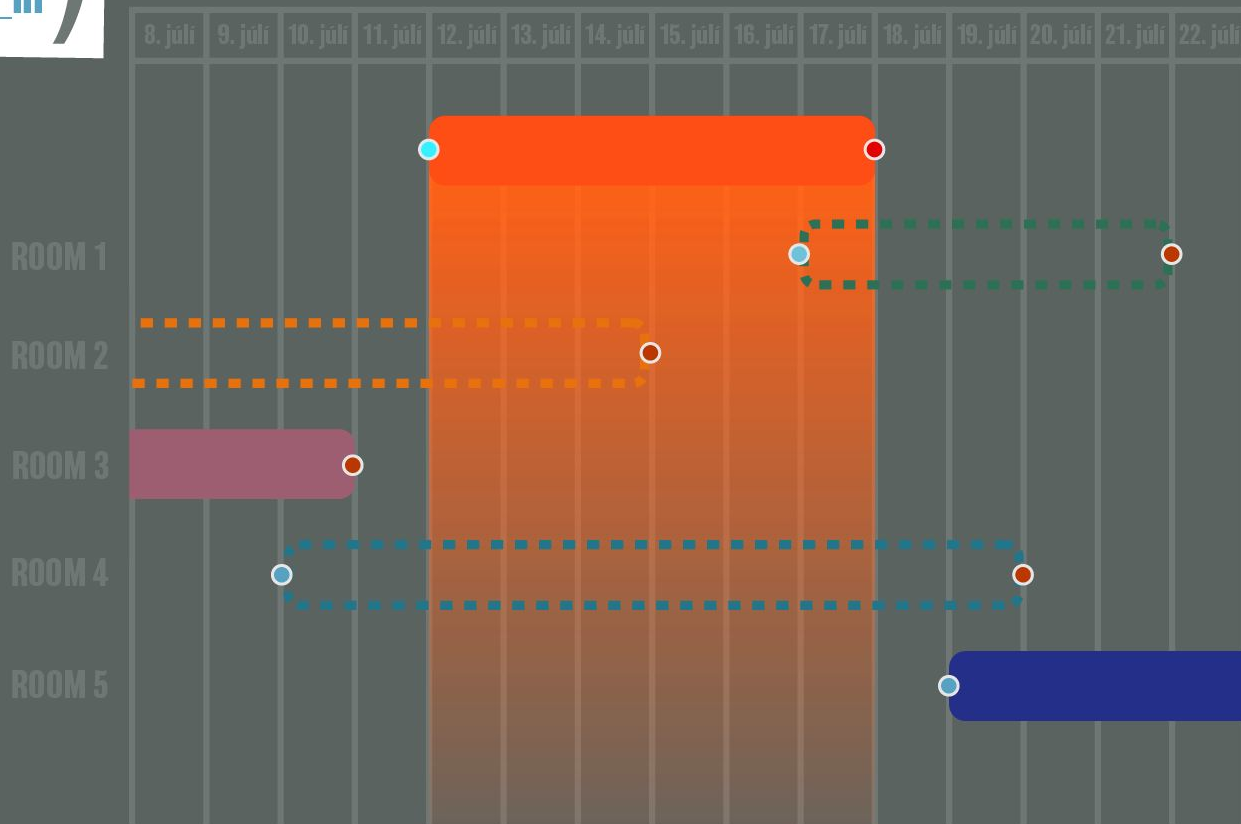

WHERE **search_in** < **check_out**
AND **search_out** > **check_in**

WHERE **search_in** < **check_out**
AND **search_out** > **check_in**

! (WHERE **search_in** < **check_out**
AND **search_out** > **check_in**)

Retrospective

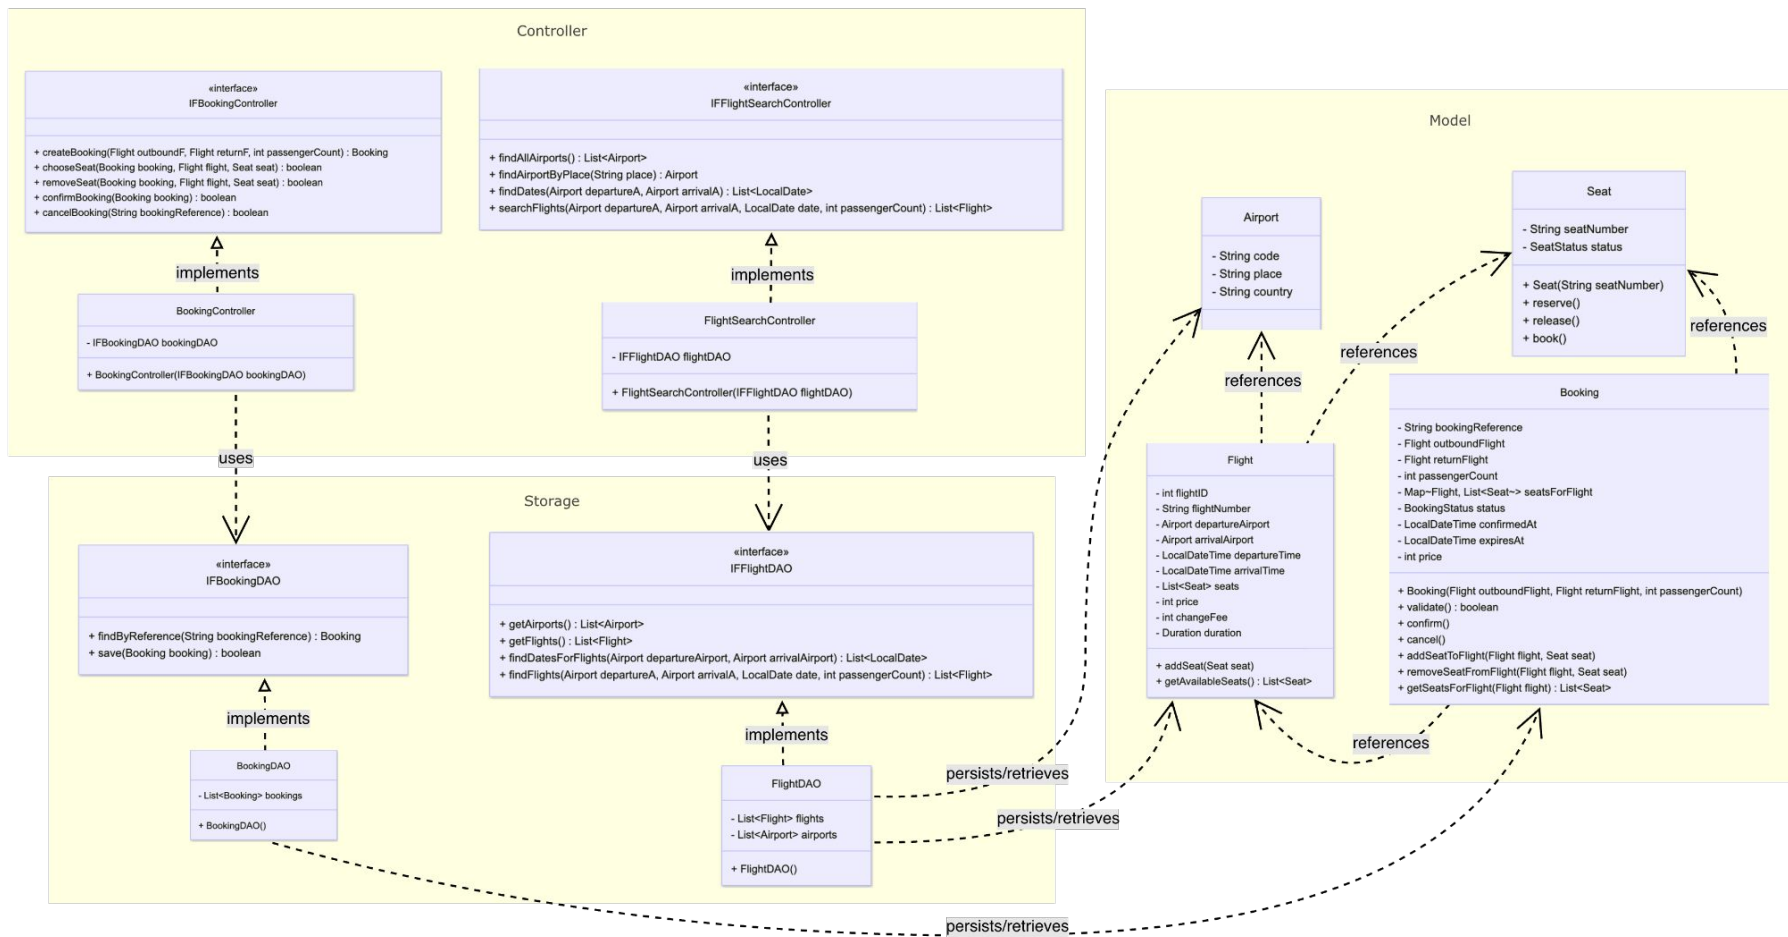

What went well:

- Teamwork within the team
- In person meetings
- Implementation (inside the group and cluster)
- The friends along the way!

What could have gone better:

- Better communication within the cluster.
- We often made things more complicated than they should.
- Next time we'll work on multiple branches in the repo.
- Comprehensive preparation for basics to avoid redoing prep.

System Architecture: Flight component

Retrospective

What went well:

- Strong preparation (user stories, models, feedback)
- Smooth implementation
- Productive in-person meetings
- Good teamwork
- Effective use of Git

What could have gone better:

- Communication with other teams in cluster
- Integration requirements were unclear
- More clarity on what the T team needed and when
- Asking questions earlier in the process

What we'd do differently:

- Understand the system better before coding
- Communicate earlier with other teams
- Align expectations across teams
- Prioritize simplicity in design
